

# The Tin Spin

Just under the wire

Now what wire might that be? No, we are not talking about the tardiness of this month's newsletter. We are of course talking about the **GRIPPLE** wire.

Below are some of the new hooks and clips available from **Gripple**. I have done something new this month. Along with the TIN SPIN I have attached a PDF file containing some samples of savings capable of being achieved by using **Gripple**. [Gripple.com](http://Gripple.com)

**Did you know fire and combination fire/smoke dampers could be installed with RUSKIN FAST mounting angle on ONLY one side of the wall? YES, YOU HEARD IT CORRECTLY!! Ruskin - Made it Happen!!**

**How much can you save by not installing that other angle on the other wall?**

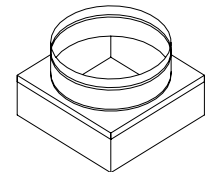

**T<sub>3</sub>SQs are coming into our warehouse. Make someone happy. Give them control**

## DONCO

You do not have to screw, tape or gunk to hold your flex to our new round neck adapters. The **DONCO** adaptor with the bead in the 2 1/2" high neck means you just strap on your flex and it stays on. The adaptor is painted black inside. Tell us what you need.

Did you know that **DONCO** makes eggcrate and perforated returns with plenums attached to the back. Top or side inlet/outlet.

Did you know that **DONCO** makes plenums per your requirements. 6" high or 14" high, 26" long or 49" long, straight sides or lipped. Lined (fiberglass or closed cell foam) or not. You tell us what you need, we can do it.

**DONCO** makes light troffers. **DONCO** makes light shields (whether for 2x2 or linear applications). **DONCO** makes plaster frames. [doncoair.com](http://doncoair.com)

## LINDAB

**Gaskets-Smashkets** — Well, Maybe — **Lindab** is the only gasketed duct system that guarantees a leakage rate of class 3 or better. Other gaskets claim they have been tested but will they guarantee it? [Lindabusa.com](http://Lindabusa.com)
