

# This is Green Air

Presented by LPR

## Fiberglass?—we ain't got no x\$!%# Fiberglass

What if there were an insulation that had better acoustic absorption characteristics than fiberglass, equal thermal performance, was anti-microbial (resists microbial growth), was non-itch, contains no formaldehyde, was environmentally safe, was cost competitive and could even earn you **LEED** points by its use.

It is here—It is available

## ENVIRO-LOC

**ENVIRO-LOC** is also a much less expensive, acoustically better product than closed cell foam insulations.

## TITUS Fan coil Units

TITUS has decided to standardize by using the Enviro-loc liner on all boxes and fan coil units. Fiberglass will only be available as an option.

## Mold Litigation?

This month's article on legal issues in the *ASHRAE Journal* is regarding mold litigation. "Practitioners can take steps to prevent and or prepare for litigation"

No mold = No litigation

The TITUS Enviro-Loc liner and Lindab with AgIon are both anti-microbial products. Titus, Lindab and other manufacturers are now offering this type of technology. Think about where it may make sense to apply some of these products.

## DOAS—Dedicated outdoor air systems

Titus has dual inlet fan terminal units and dissimilar inlet size dual duct boxes. Either unit allows you to control your outside air and primary air independently.

When teamed up with a 98% (98 would be nice—Regent Eco is up to 93% efficient) efficient air to air heat exchanger this system offers some control strategies and energy savings that will afford quick paybacks.

The Lindab double wall duct connection with the gas-keted ends has been shown to be thermally superior to the old conventional connection. In-fra-red cameras are a wonderful thing.
