

# This is Green Air

Presented by LPR

## AgION has been Tested and APPROVED

### AgION Anti-microbial Coating

The **FDA** (Food and Drug Administration) has listed AgION for use as an additive in food contact Polymers.

The **NSF** (National Science Foundation) has certified the product safe and acceptable for product zone and food zone applications.

The **EPA** (Environmental Protection Agency) has listed AgION for use in HVAC systems.

**UL** (Underwriter's Laboratories) has tested AgION using Standard 723. Smoke and flame spread was virtually zero.

Testing at two Universities and an independent lab provided the following results:

"AgION coated stainless steel was found to be capable of inactivating 99.9% of the *L. pneumophila* (*Legionella*) added to the surface at 37°C after an exposure time of 4 hours. No decrease was observed with the uncoated steel"

"Therefore the AgION treatment was effective in the reduction of *Escherichia coli* on stainless steel stored at 37°C for 24 hours."

"The difference at 48 hours appears to be related to growth of *Listeria* on the untreated steel which did not occur on the AgION treated steel"

**Lindab ductwork coated with AgION™ inhibits the growth of Mold, Mildew and Bacteria.**

### ECM Motors

Energy can be reduced and therefore money saved by implementing ECM motors in Fan Powered Terminal Units. How much energy and how long a pay-back depends on hours of operation and careful analysis compared to standard PSC motors. We can help you pick the motors to achieve the greatest savings.

### Gripple Hang Fast

Have you seen **GRIPPLE HANG FAST** cable hangers? **GRIPPLEs** are being used to hang Terminal Boxes, duct work (round and rectangular), Fan coils, Heat pumps, Lights, Cable trays, Infra-red heaters and signs. **GRIPPLEs** make hanging things Fast, Neat and Secure. What can you hang with a **GRIPPLE**?

**Demand speed  
control?**

**It works**

**Have you tried  
it?**

### Air Doesn't Care

Yes, it is true, a major government study, costing millions of dollars, has discovered that despite the best B.S. of many manufacturers, Air, yes air itself, has decided to obey the laws of physics and not bend, bow and deflect due to PAC money. Mass, jet surface area and obstructions will determine throw to 50 fpm.
