

# This is (almost) Green Air

Presented by NASPR

This is simulated UV. Had it been real UV, we would have sent protective glasses with this e-mail.

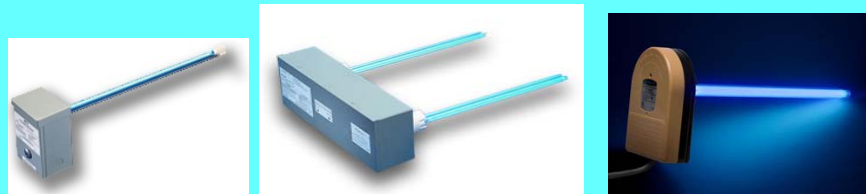

## UV at ASHRAE NY

According to the latest Zigby, Quinnipiac, Neilson polls there were 61 exhibitors at the ASHRAE 2008 product show who were either showing UV as a standalone product or incorporating UV into their product offering. The vast majority of these applications were coil and drain pan irradiation. Other than killing those bad things, UV, by keeping coils clean, will reduce energy costs.
