CONTROL

What if you could add heat to individual diffusers?

What if this individual diffuser, with electric heat, had individual control.

What if this diffuser was a VAV diffuser in the cooling mode and VAV in the heating mode?

What if this system (diffuser - heater—control) costs less than \$1,000,000.00 each? Much Less?

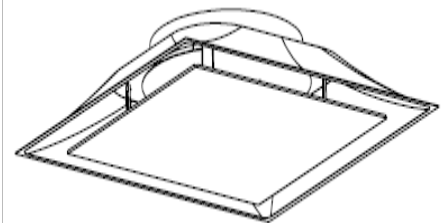

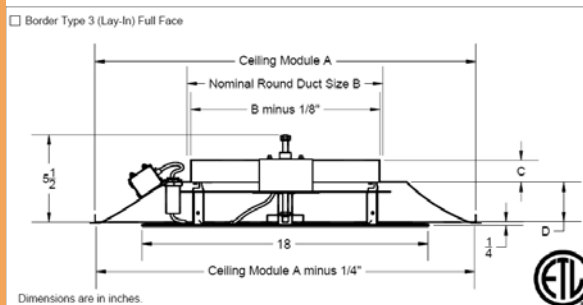

What if three of the above are possible?

They are all possible and currently available.

The TITUS T3SQ-1 is an analog VAV diffuser that can incorporate an electric heater. In the cooling mode this SCR controlled heater turns on 1 degree below the set-point. In the heating mode the diffuser first drives open and then if the temperature drops 1 degree below set-point the heater is energized. The mode is switched by sensing supply air temperature. Titus has an application and Design guide on their website titus-hvac.com

Ruskin Louvers

Ruskin now offers ONLINE louver selection. If you go to the RUSKIN website Ruskin.com You will see LEADS Louver selection Click and Go

Last chance - until the next time - to tell us you want to join us and TITUS for some stewed bull horn, or some such Texan treat, at ASHRAE in Dallas

Now that you know what it can do—here is what it can do for you.

Offer individual control—increase productivity

Gain LEED points

Make designs simple
